THE EFFECTS OF DRUG ABUSE ON THE TEEN BRAIN

Keynote: Dr. Stephen Dewey

The impact that drugs and other legal and illegal substances have on the developing brain

Dr. Dewey discusses a range of drugs of abuse including illicit drugs, prescription drugs, marijuana, synthetic marijuana, energy drinks, caffeine, e-cigarettes and Flakka. Additionally, through the use of actual PET images, he explains how alcohol and drug use affect the developing adolescent and adult brain. His format is non-judgmental and is based on objective scientific data. The presentation empowers teachers, parents, administrators, staff and communities at large, with the knowledge and confidence to guide their children/students through the adolescent and teen years.
